

1.2m aluminum bulwork staircase

The 1.2 -meter aluminum Bulwork staircase is designed to ensure safety and comfort in boarding and disembarking operations on maritime vessels. Made of high quality aluminum, this ladder is highly corrosion resistant caused by seawater, providing long durability. It has four wide and non -slip steps that offer stable access and minimize slip risk. In addition, its removable handrails (available on one or both sides) ensure flexibility and practicality in handling. The tips in hook allow easy fixation in the ship's handrail, making storage and use even more practical.

COD EUROSUL: 000608

IMPA: ---

Part Number: ---

Approvals: ---

Specifications

Benefits

Improved Safety: Antider therapy steps minimize the risk of falls.

Corrosion resistance: Aluminum construction ensures long durability in maritime environments.

Functional Design: Removable handrails and hook fixation system facilitate use and storage.

Applications

Maritime vessels: Ideal for boarding and disembarking on ships and other vessels.

Ports and Marinas: Provides additional safety in port operations.

Technical Specifications

Maximum height: 1.2 m

Width: 80 cm

Material: Corrosion resistant aluminum

Quantity of steps: 4

Weight: 29 kg
