

## 150/270n mk5 hydrostatic valve for inflatable vest

The 150/270N MK5 Hydrostatic Valve is an automatic activation device for inflatable life jackets, driven when contacting water. This mechanism guarantees immediate inflation, providing safety and reliability in maritime emergencies. In addition to automatic activation, the valve has manual drive, allowing the user to inflate the vest as needed.

**COD EUROSUL:** 003672

**IMPA:** ---

**Part Number:** ---

## Specifications

### Features

- Dual activation: Automatic upon contact with water or manual
- Compatibility: For 150N and 270N inflatable life jackets
- Resistance: Withstands saltwater and extreme environments
- Ensures safe and reliable activation in emergencies

### Applications

- Inflatable life jackets certified SOLAS/MED
- Safety equipment for commercial and recreational vessels
- Offshore operations and maritime rescue

### Benefits

- Enhanced safety, ensuring immediate inflation upon water contact
- Versatile activation, allowing automatic or manual use
- High durability and resistance, designed for harsh maritime conditions
