

Air horn for life boat

Air horns is essential equipment for signaling in life boats, meeting maritime safety standards. Compact and easy to use, it is ideal for various applications, including transportation, events and emergency operations. Provides a powerful sound, ensuring efficiency in situations where sound communication is indispensable.

COD EUROSUL: 000415

IMPA: 330611

Part Number: ---

Approvals:

SOLAS

Specifications

Features

Material: Made with lightweight and resistant materials

Design: Compact, facilitates storage and transportation

Operation: Manual, no external energy source required

Applications

Signaling in lifeboats

Use in events and transport

Emergency communication in various scenarios

How to Use

Thread the horn onto the pump

Unlock the plunger by turning it 1/2 turn counterclockwise

Push the plunger to emit the sound

After use, retract the plunger and lock it by turning 1/2 turn clockwise

Benefits

Practicality: Easy to operate and store

Effectiveness: Produces a powerful, long-range sound

Versatility: Suitable for different contexts, including maritime signaling and events

Technical Specifications

Type: Manual

Application: Signaling in lifeboats and other environments
