

## Aldis lantern lenses – red, green, blue and lid (Francis)

This set of colored lenses is compatible with the Aldis Model FSP127 signaling flashlight, meeting the standards of the Solas Convention. Includes red, green, blue and protective lid lenses. Ideal for visual communication by Morse code in naval and offshore environments, it offers versatility in luminous beam modulation.

**COD EUROSUL:** 004326

**IMPA:** ---

**Part Number:** ---

**Approvals:** ---

## Specifications

### Features:

Material: High resistance optical glass with adjustable frame

Fixers: Mounting system with front ring and internal screws

Design: interchangeable filter discs, with easy replacement

Dimensions: Approximately 47 cm x 21 cm x 25 cm (set dimensions)

### Applications:

Francis FSP127 signaling lanterns

Visual Signaling on Vessels and Offshore Installations

Emergency and communication operations by Morse

### Benefits:

Readiness: Allows fast filter exchange according to the required sign type

Durability: adequate mechanical and thermal resistance for aggressive maritime environments

Safety: ensures clear visibility and correct signal coding, essential for safe navigation

The ideal choice to maintain compliance with maritime visual signaling patterns according to solas.

### Technical Specifications:

Material: Optical glass with thermal protection

Fixers: Mounting with front ring and screws

Dimensions: 47 cm x 21 cm x 25 cm
