

Aquashield 14oz lubricant grease – Underwater and nautical use

Aquashield grease is a high performance grease formulated with a special polymer that provides excellent metal grip, even in wet and submerged environments. Its extremely sticky and fully waterproof composition makes the product ideal for severe applications in marine, underwater and offshore environments. Recommended for bearings and equipment that operate in direct contact with water or exposed to constant humidity, such as deck machines, retractable fluctuation systems and ROV applications.

COD EUROSUL: 004811

IMPA: ---

Part Number: 13069323-AQ14-25

Approvals: ---

Specifications

Technical Characteristics

Type: Synthetic high-adhesion grease

Packaging: 14 oz cartridge (approx. 400g)

Color: Dark brown

Adhesion: Extremely high metal adhesion

Water Resistance: 100% waterproof

Applicability: Continuous use in immersion and salt exposure

Anti-Corrosive Action: Protects against oxidation in marine environments

Applications

Boat trailer wheel bearings

Retractable wheel systems in floatplanes

ROVs and underwater equipment

Deck machinery of tugs and industrial fishing vessels
Offshore drilling equipment

Benefits

High Adhesion: Polymer attracts grease to metal, even underwater

Sealing and Protection: Prevents water ingress, avoiding corrosion

Versatility: Works in submerged and intensive maritime applications

Durability: Extends service life of submerged bearings and mechanisms

Operational Efficiency: Reduces need for frequent reapplication
