

Double Horizontal Cradle for Inflatable Raft

The Double Horizontal Cradle is designed to provide an efficient and secure storage solution for inflatable rafts in marine environments. Made from ASTM A588 / NBR 7007 AR 350 COR structural steel angles and profiles, this cradle ensures high strength and durability while featuring a reduced weight, ideal for easy handling and installation onboard.

Specifications

Features

Material: Structural steel ASTM A588 / NBR 7007 AR 350 COR.

Structure: Double horizontal for two inflatable liferafts.

Finish: Resistant to marine corrosion.

Design: Lightweight and robust.

Base: Safe and stable for storage.

Applications

Cargo ships, tugboats, support vessels, and cruise ships.

Secure storage of inflatable liferafts on decks or areas with height restrictions.

Safety equipment on board commercial and recreational vessels.

Benefits

Maximizes horizontal space usage on deck areas.

Allows quick access to liferafts in emergency situations.

Simple installation and low maintenance.

High durability with excellent corrosion resistance.

Package Contents

01 double horizontal cradle for inflatable liferafts.
