

Brass Barometer 155mm

Eurosul

The Eurosul barometer is an accurate and elegant atmospheric pressure measurement instrument, ideal for water and marine environments. Its robust polished brass structure gives corrosion resistance and a sophisticated appearance, suitable for both technical and decorative applications on vessels. This barometer allows the reading of the pressure in millibars (MB) and mercury (INHG) inch, with clearly marked scales to facilitate visualization. Used mainly for weather forecast on board, it indicates imminent climate variations based on atmospheric pressure fluctuations.

COD EUROSUL: 091400

IMPA: 370246

Part Number: ---

Approvals: ---

Specifications

Features

Material: Polished brass resistant to corrosion

Dual Scale: Millibars (mb) and inches of mercury (inHg)

Approximate Diameter: 155 mm

Reading: Accurate atmospheric pressure measurement

Design: Classic with glass display and adjustable pointer

Applications

Maritime navigation

Onboard weather stations

Functional decoration for nautical environments

Real-time monitoring of weather variations

Benefits

Accuracy: Indicates imminent weather changes based on air pressure

Durability: Made of polished brass, resistant to saline environments

Functionality and Aesthetics: Combines technical reading with a classic nautical look
