

Cylinder Screw for Inflatable Rafts

The Cylinder Screw is a vital component for the safe maintenance and operation of inflatable rafts. Designed to ensure the integrity and functionality of the inflation system, this screw must be replaced after each cylinder use, ensuring the safety and effectiveness of emergency equipment. Regular replacement of this component enhances raft readiness, minimizing risk during emergency situations.

COD EUROSUL: 003463

IMPA: ---

Part Number: ---

Approvals: ---

Specifications

Features

Function: mandatory replacement after cylinder activation.

Use: only the screw is replaced, preserving the cylinder.

Material: high-strength, corrosion-resistant alloy suitable for marine use.

Installation: quick and easy.

Benefits

Safety: ensures reliable operation of the inflation system.

Cost-effective: eliminates need for full cylinder replacement.

Durability: resists corrosion and harsh marine conditions.

Practicality: simplifies preventive maintenance.

Technical Specifications

Material: corrosion-resistant alloy.

Compatibility: liferaft inflation cylinders.

Replacement: required after each cylinder use.

Contents: 01 inflation cylinder screw.
