

EURO Oil Tape Anti -Corrosive Tape – Protection for aggressive environments

Euro Tape Petrolate tape is an anti-corrosive sealing solution developed to offer maximum protection in adverse environments. Produced with neutral Vaseline synthetic tissue, this tape provides an effective corrosion barrier, being ideal for the protection of junctions, valves, pipes and metal connections exposed to moisture, chemicals and aggressive atmospheres. With high flexibility and grip, Euro Tape ensures easy application and long durability, even under extreme conditions.

Specifications

Features

Corrosion Protection: Creates a resistant barrier against corrosion, extending the service life of metal components

High Resistance: Withstands aggressive environments, ensuring the integrity of treated surfaces

Easy Application: Flexible and adhesive, allowing efficient and uniform coating on various surfaces

Versatility: Can be applied to valves, piping, connections and other metal parts subject to corrosion

Applications

Industrial Environments: Protects equipment and metal structures against corrosion in chemical, petrochemical and naval industries

Component Protection: Ideal for valves, junctions, flanges and piping exposed to moisture and chemical agents

Marine Installations: Excellent for vessels, offshore platforms and ports, where exposure to salt

water and marine air accelerates corrosion

Benefits

Efficient Protection: Physical barrier against corrosive agents

Ease of Use: Manual application without special equipment required

Economy: Reduces maintenance and component replacement costs

Technical Specifications

Material: Synthetic fabric with neutral vaseline coating

Fasteners: Self-adhesive, self-conforming, no tools required

Use: Sealing and corrosion protection in industrial and marine environments

Application: Manual, quick and easy, directly on metal surfaces

Colors: Light brown (vaseline)
