

Fiberglass 4-Section Telescopic Pole 4.5m SOLO 100

The soil 100 telescopic cable is a professional battery with a 4.5 meter range, designed to facilitate testing and maintenance in smoke and heat detectors installed in high places. Made of seasoned fiberglass, it offers high strength, lightness and electrical safety, being a practical and safe alternative to the use of stairs, scaffolding or platforms

COD EUROSUL: 004072

IMPA: ---

Part Number: ---

Approvals: ---

Specifications

Features

Material: Tempered fiberglass, non-conductive

Fasteners: Manual locking system between sections

Design: Telescopic structure with 4 sections, lightweight, strong, and easy to handle

Dimensions: 4.5 meters fully extended

Applications

Access to smoke and heat detectors installed at height

Use on vessels, offshore platforms, and industrial facilities

Maintenance of fire detection systems in critical environments

Benefits

Readiness: Allows quick and safe access without assembling structures

Durability: Robust fiberglass construction, resistant to wear and harsh environmental conditions

Safety: Non-conductive material, ensuring electrical safety and operational stability

Technical Specifications

Material: Tempered fiberglass

Fasteners: Manual locking system between sections

Dimensions: 4.5 meters (fully extended) with 4 sections
