

FIRE SOBER WITH ISOLATED CABLE

The isolated cable fire ax is a key tool to ensure safety in electrical risk environments during fire and redemption operations. Its coated cable with insulating rubber offers protection against shocks of up to 6000V, allowing safe acting in energized places. Compact and robust, it allows the efficient breakup of doors, windows and structural barriers, being indispensable for emergency teams.

COD EUROSUL: 002843

IMPA: ---

Part Number: ---

Approvals: ---

Specifications

Features

Material: Insulated rubber handle.

Design: Compact and ergonomic, ideal for use in electrical risk areas.

Insulation: Protection up to 6000V.

Origin: China.

Benefits

Readiness: Compact and easy to handle for rapid emergency response.

Safety: Provides reliable electrical insulation, protecting the user.

Durability: Built for heavy-duty use in demanding environments.

Applications

Firefighting: Enables safe access to energized areas.

Rescue and emergency: Suitable for environments with electrical presence.

Industrial and offshore operations: Essential tool for high-risk electrical zones.

Technical Specifications

Electrical insulation: Up to 6000V.

Handle material: Insulated rubber.
Origin: China.
