

Fotoluminescent Tape Arrow output route

The photoluminescent ribbons indicative of steering are designed for efficient evacuation routes, outputs and safety areas in emergency or electrical failure. Thanks to their photoluminescent properties, these ribbons guarantee high visibility even in the absence of lighting, guiding evacuation quickly and safely. Made of resistant polyester, they are ideal for applications in maritime, industrial and commercial environments.

COD EUROSUL: 092029

IMPA: ---

Part Number: ---

Approvals: ---

Specifications

Benefits

High Visibility: Photoluminescent material keeps arrows visible in the dark, facilitating orientation in emergencies

Durability: Made from resistant polyester, ensuring long service life and resistance to various environmental conditions

Easy Application: Features high-quality acrylic adhesive for practical and efficient installation

Versatility: Available in directional arrows or “V” indication versions, adapting to various signaling needs

Applications

Corridors and Exits: Ideal for marking evacuation routes in buildings, ships, offshore platforms and industrial facilities

Safety Areas: Indicates safe zones and exit paths in emergency situations

Industrial Environments: Essential for factories, warehouses and other locations requiring clear and reliable signage

Technical Specifications

Material: Polyester

Dimensions: 5 cm x 10 m

Material Properties: Photoluminescent

Adhesive Type: Acrylic

Available Versions: Directional arrows or “V” indication
