

International Storz Fire Connection – DN40, DN50 and DN65

Storz-type International Fire Hose Coupling, designed for use in land-based fire systems. Built according to international standards, it enables fast and secure hose connections with effective sealing. Suitable for hydrants and fire valve installations in marine, offshore, and industrial environments.

COD EUROSUL: 001132

IMPA: ---

Part Number: ---

Approvals:

Specifications

Features

Material: Marine bronze alloy body resistant to corrosion

Fasteners: Stainless steel screws and washers

Design: Quick Storz coupling system with sealing gasket and flanged support

Dimensions: Available in DN40 (1.1/2"), DN50 (2") and DN65 (2.1/2") diameters

Applications

Firefighting systems on vessels, offshore platforms and industrial facilities

Hose connection to valves and hydrants

Use in areas requiring quick exchange of firefighting equipment

Benefits

Readiness: Allows fast and secure connections in emergency situations

Durability: Materials resistant to the marine environment ensure long service life

Safety: Firm locking system prevents accidental disconnections and leaks

Essential for ensuring efficiency and safety in firefighting operations according to international maritime and offshore standards.

Technical Specifications

Material: Marine bronze

Fasteners: Stainless steel with washers

Dimensions: DN40 (1.1/2"), DN50 (2"), DN65 (2.1/2")

| Eurosul Code | Model | ØD | Description |
