

Stainless Steel Bow Shackle AISI 316 – 12.7 mm (1/2 in), 4 Parts – HL0110

The HL0110 stainless steel bow shackle (AISI 316) is designed for heavy-duty marine and industrial applications. Built with 4 components (body, pin, nut, and cotter pin), it ensures maximum safety and durability under harsh environments. Its oversized anchor shackle design allows secure connections to chains, ropes, and rigging systems, making it reliable for offshore and nautical use.

COD EUROSUL: 096475

IMPA: ---

Part Number: HL0110

Approvals: ---

Specifications

Features:

Material: Stainless Steel AISI 316 (marine-grade, corrosion resistant)

Type: Oversize Bow Anchor Shackle

Components: 4 parts (body, pin, nut, and cotter pin)

Diameter (A): 12.7 mm (1/2")

Internal Width (B): 20.60 mm

Inner Radius (R): 33 mm

Total Length (L): 55.60 mm

Minimum Breaking Load (B.L.): 8,700 lbs (~3,946 kgf)

Applications: Mooring and rigging on vessels, offshore and port operations, lifting heavy equipment, safe fastening in nautical and industrial systems.

Benefits:

High strength: Designed for heavy-duty loads

Durability: Excellent resistance in marine and corrosive environments

Safety: Equipped with nut and cotter pin for secure locking

Versatility: Suitable for marine, offshore, and industrial use

Technical Specifications:

Model: HLO110

Material: Stainless Steel AISI 316

Diameter: 12.7 mm (1/2")

Dimensions: B = 20.60 mm | R = 33 mm | L = 55.60 mm

Minimum breaking load: 8,700 lbs (~3,946 kgf)

Components: Body, pin, nut, cotter pin
