

Marine Tape Strong Wrap Phaseal asphalt ribbon – Porão Caps Sealing

The Marine Tape Strong Wrap Phaseal tape is a high performance self-adhesive bituminous tape, designed for boat covers sealing on vessels. Its function is to protect the load against seawater, rain and other weather during maritime transport. Composed of modified asphalt mass with polymers, it has excellent mechanical resistance, impermeability and flexibility. Suitable for sensitive loads such as grains, fertilizers and general loads, avoids contamination, infiltration and moisture losses.

Specifications

Features

Composition: Polymer-modified bitumen

Structure: Plastic base with bituminous mass and high-adhesion adhesive

Average thickness: ≥ 2 mm

Thermal resistance: Up to 70°C without dripping

Waterproof: Yes, with proven tightness at 0.2 MPa

Cold flexibility: -20°C without cracking

Quality certification: Tested according to GB23441-2009 standard

Applications

Sealing of hatch covers on bulk carriers

Cargo protection against seawater and rain

Maritime and logistics environments requiring waterproofing

Maintenance of tightness on metal covers and sealing structures

Benefits

Efficient sealing: Ensures water and moisture tightness

Durability: Resistant to harsh maritime conditions

Versatility: Applicable on various surfaces and temperatures

Technical Specifications

Material: Polypropylene-modified bituminous mass

Thickness: ≥ 2 mm

Color: Black

Service temperature: up to 70°C

Cold flexibility: down to -20°C

Tightness: 0.2 MPa for 120 minutes

Adhesive: Self-adhesive with high fixation

Technical standards: GB23441-2009 | GB/T328.10 | GB/T328.14

Storage: between -20°C and 60°C, away from heat sources
