

McMurdo LTB3 Emergency Battery for GMDSS RADIO

The McMurdo LTB3 is a non-rechargeable lithium battery, designed for maritime safety equipment. Offering high reliability and an extended lifespan, this battery is ideal for critical emergency applications. Note: Replacement must be carried out by manufacturer-authorized agents to ensure compliance with safety standards and minimize operational risks.

COD EUROSUL: 003536

IMPA: ---

Part Number: 84-210

Approvals: ---

Specifications

Features

Material: Lithium-based chemical composition including metals and minerals

Compatibility: Suitable for a wide range of maritime safety devices

Design: Resistant with protection against leakage and impacts

Certification: Class 9 risk classification according to international transport regulations

Applications

Power supply for emergency and maritime rescue equipment

Benefits

Readiness: Always available for immediate use in critical situations

Durability: Designed to withstand adverse conditions ensuring high resistance

Safety: Replacement by authorized agents ensures proper and safe handling

The McMurdo LTB3 battery is essential for maritime safety equipment providing reliable performance and compliance with international standards

Technical Specifications

Material: Lithium with safe chemical composition for maritime use

Risk classification: Class 9

Certifications: CONAMA 401/08 Resolution and ANTT regulations
