

MK5 BP0510 Whale Sewage Manual Pump – 17.5 GPM – ISO 15083 and 18813 Certificate

The Whale MK5 BP0510 manual manual pump is a robust, reliable and certified solution for use on boats, including life boats. This double -acting model provides high flow of up to 66 liters per minute (17.5 gpm), with the ability to empty two compartments simultaneously or a single basement with twice as much speed. It has double diaphragms and facilitated maintenance system without tools. Its versatility allows installation in three guidelines: on deck, through the deck or in bulk. ISO 15083 and 18813 certified, meets the requirements for maritime safety equipment.

COD EUROSUL: 000947

IMPA: ---

Part Number: BP0510

Approvals: ---

Specifications

Features

Material: Fiberglass-reinforced polypropylene body, neoprene valves and diaphragms, stainless steel fasteners

Fasteners: Includes ergonomic handle lever, valve kit, and dual manifolds

Design: Compact and lightweight with odor-proof sealing, quick inspection, and continuous flow valves

Dimensions: Weight 1.85 kg; connections for smooth hose 1 ½” (38 mm)

Applications

Lifeboats and vessels

Bilge pumping and wastewater transfer

Medium and large boats (over 12 meters)

Benefits

Readiness: High-performance manual pump, even in case of power failure

Durability: Corrosion- and marine-wear-resistant materials

Safety: ISO 15083 and 18813 certifications, dual action ensures operation even if one diaphragm fails

Technical Specifications

Material: Reinforced polypropylene, neoprene, EPDM, stainless steel

Fasteners: Nylon handle with grip, valves, and 1 1/2" connections

Dimensions: 1.85 kg, suction/discharge capacity up to 4 m, flow rate of 66 LPM
