

Pneumatic Rubber Marine Fender

The **Pneumatic Rubber Marine Fender** is an essential piece of equipment for vessel and port protection, reducing impacts during berthing and offshore operations. Manufactured from high-quality rubber, the fender features a robust pneumatic core and is covered with reinforced chains and tires, ensuring durability and high energy absorption.

COD EUROSUL: 094154

IMPA: ---

Part Number: ---

Approvals: ---

Specifications

Benefits:

Durability: Constructed from high-quality rubber, resistant to impacts and harsh conditions.

Enhanced Safety: High energy absorption, reducing damage to vessels and port structures.

Versatility: Suitable for port maneuvers and offshore operations, ensuring efficient protection in different scenarios.

Applications:

Ports and Maritime Terminals: Essential for impact absorption during berthing and ship movements.

Offshore Operations: Used on platforms, FPSOs, and offshore support vessels.

Vessel Protection: Ideal for large ships, tankers, and cargo vessels.

Technical Specifications:
