

Magnet for Pilot Ladder

The practical ladder magnet is an indispensable accessory to ensure safety and stability during boarding and disembarking operations, especially under adverse sea conditions. Light and extremely resistant, the magnet has 15% reduction in the manual effort required for release, increasing operational efficiency. Its flexible base allows better adaptation to irregular surfaces, such as hooves with naval painting, corrosion, welding strings and curvatures, providing maximum adhesion even under severe conditions.

COD EUROSUL: 005077

IMPA: 232093

Part Number: ---

Approvals: ---

Specifications

The product meets international safety standards and can be used in various maritime applications beyond the fixation of practical Ladder.

Features:

Light and resistant: high performance construction with ease of handling

Flexible base: adaptation superior to irregular and curved surfaces

Multifunctionality: use in practical Ladder, containment barriers and maintenance equipment

Applications:

Boarding and disembarking: secure fixation of practical Ladder on ships and platforms

Naval maintenance: stabilization of tools and equipment in repair operations

Environmental control: Fixation of floating barriers in oil containment actions

Benefits:

Ease of operation: 15% less effort for manual release

Improved safety: firm and secure grip on different surfaces

Versatility: applicable to various operational scenarios in the naval and offshore sector

Manual effort reduction: 15%
