

RL4 External Lamp for Inflatable Balsa – Daniament (no battery) 400 mm

RL4 is an intermittent external signaling lamp designed for installation on inflatable ferries. It should be used in conjunction with the RB2 battery module (sold separately), forming a complete emergency lighting system. This unit is in accordance with the sole regulations and has AM certification issued by DNV. The 400 mm long version is ideal for compact applications with excellent visibility in all directions.

COD EUROSUL: 004465

IMPA: ---

Part Number: ---

Approvals:

Specifications

Features:

Material: sealed plastic body, salt water resistant and weather

Fixers: Standard RB2 coupling connector with 400 mm cable

Design: Translucent lens with high gloss intermittent system

Food: exclusively via external battery RB2

Operation mode: Automatic flash when fed

Autonomy: ≥ 12 hours (when connected to RB2)

Applications:

External signaling of inflatable ferries of abandonment

Maritime salvage equipment according to international standards

Systems approved for merchants, military and offshore platforms

Benefits:

Readiness: easy installation and connection to the RB2 system, immediate activation
Durability: vibration resistance, weather, fungal growth and solar radiation
Safety: Certification Solas Med guarantees continuous visibility in emergencies
Essential Product for Abandonment Operations According to Solo III/35 and III/36 regulations.

Technical Specifications:

Model: RL4

Light Type: Intermittent (Flashing)

Cable length: 400 mm

Power source: RB2 module (not included)

Autonomy: \geq 12 hours with RB2

Certifications: MEDB0000617, Solas, MSC.1/Circ.1628, EN 60945, ISO 24408
