

Solo 101 Fibreglass Extension

Pole – 1.13m

The Cable/Land Extensor Solo 101 is a fiberglass accessory designed to increase the reach of soil 100 and soil testers 108. Each adds 1.13 meters in length, allowing greater flexibility and range in smoke detection and alarm tests. It can be used individually, providing a maximum range of 2.5 meters, or combined with up to three soil units 101 to reach up to 9 meters high.

Specifications

Features

Length: 1.13 m

Compatibility: Solo 100, Solo 108, and Solo/Testifire tools

Material: Durable fiberglass

Locking Mechanism: Simple system for secure connection

Design: Lightweight yet robust, offering excellent strength-to-weight ratio

Applications

Modular extension for reaching detectors in elevated locations

Testing and maintenance of smoke and heat detection systems

Use in industrial, commercial, marine, and offshore facilities

Benefits

Readiness: Quick assembly and immediate use with secure locking system

Durability: Sturdy fiberglass construction for long-lasting performance

Safety: Insulating material for enhanced electrical protection during use

Versatility: Compatible with multiple Solo and Testifire devices

Technical Specifications

Length: 1.13 m

Material: Durable fiberglass

Compatibility: Solo 100, Solo 108, and Solo/Testifire tools

Weight: Lightweight for prolonged handling
