

Solo 108 Fiberglass 2.40m Telescopic Pole for Testers

Cable/Fiber Cable Extensor Solo 108 is a telescopic accessory designed to provide higher range in smoke and heat detecting test operations. With adjustable length of up to 2.40 meters, it can be used in conjunction with up to three soil extensions 101, allowing to reach heights of up to 4 meters. Made of fiberglass, it offers lightness, resistance and electrical insulation for safety during use.

Specifications

Features

Model: Solo 108

Length: Extendable up to 2.40 m

Material: Fiberglass

Compatibility: Can be used with up to 3 Solo 101 extensions

Design: Telescopic structure, lightweight and durable, with electrical insulation

Applications

Testing smoke and heat detectors in hard-to-reach locations

Preventive maintenance of fire detection systems

Commercial, industrial, and marine installations with high ceilings

Benefits

Readiness: Lightweight structure allows prolonged use with less physical effort

Durability: Robust fiberglass construction, resistant to impacts and wear

Safety: Insulating material reduces the risk of electrical hazards

Versatility: Compatible with additional extensions for greater height reach

Technical Specifications

Model: Solo 108

Length: 2.40 m (extendable)

Material: Fiberglass

Compatibility: Up to 3 Solo 101 extensions
