

## Solo C6 CO Detector Test

### Aerosol – Box of 12 Units

The Solo C6 CO Detector Test Aerosol is a non-flammable test gas developed to simulate the presence of carbon monoxide for functional testing of CO detectors. It replaces the previous Solo C3 model while maintaining the same reliability, safety, and performance, now available in a 12-can box. UL-certified and approved by leading detector manufacturers, the Solo C6 enables fast, safe, and accurate testing of CO detection systems in industrial, commercial, marine, and offshore environments. Its aerosol design ensures easy handling, consistent application, and high efficiency, making it ideal for preventive maintenance and professional inspections.

**IMPA:** ---

**Part Number:** ---

**Approvals:** ---

## Specifications

### Features:

**Type:** Non-flammable test gas

**Application:** Simulates carbon monoxide for functional testing of CO detectors

**Certification:** UL certified and approved by major detector manufacturers

**Format:** Aerosol spray – box with 12 cans

**Use:** Manual, practical, and easy to apply

### Benefits:

**Readiness:** Provides fast testing and immediate detector reset

**Durability:** High-performance product with excellent coverage and reliability

**Safety:** Certified non-flammable formula ensuring safe operation

**Efficiency:** Delivers a uniform and consistent spray for accurate results

**Technical Specifications:**

**Material:** Non-flammable test gas

**Compatibility:** Compatible with Solo CO detectors and other certified models

**Fixings:** Manual directional spray application

**Certification:** UL

**Contents:** Box with 12 standard Solo aerosol cans
