

Yellow Signaling Cone for Lantern

Yellow signaling cone developed for coupling in portable lanterns used in naval, offshore and industrial environments. Made of sturdy plastic material, its function is to transform the flashlight beam from a diffuse and highly visible visual signal, ideal for emergency operations, manual signs or delimitation of areas. Compatible with various flashlight models and can be used with models similar to Bright Star AW70.

COD EUROSUL: 003564

IMPA: ---

Part Number: ---

Approvals: ---

Specifications

Features:

Material: Resistant and translucent plastic

Fixers: Pressure fitting (without tools)

Design: conical, lightweight, adaptable to standard flashlights

Dimensions: Not specified (compatible with medium lanterns)

Applications:

Emergency signaling in maritime or industrial areas

Delimitation of risk zones or boarding/landing

Support equipment for evacuation and night maneuvers

Benefits:

Readiness: Quick fit into ordinary lanterns, without tools

Durability: material resistant to intense use and weather

Safety: Expand operator visibility and improve visual communication

Essential for operations in accordance with visual safety practices in the maritime and offshore environment.

Technical Specifications:

Material: translucent yellow plastic

Fixers: Pressure

Dimensions: adaptable to standard flashlight models
