Specifications

Overview

FPD fall prevention device for lifeboats and rescue craft, designed to act as a second safety line between the boat and the davit fall blocks. It is supplied with UHMWPE rope and shackles in a compact configuration for onboard operation.

Application and use

Suitable for lifeboat lowering and hoisting, helping reduce risk during front and rear davit operations. The assembly is installed between the boat and the lifting system attachment points.

Construction characteristics

Material	UHMWPE
Configuration	Rope with shackles
Includes shackles	Yes
Model	FPD

Technical specifications

Diameter	30 mm
Length	1 m
Working load	9.5 ton
Minimum breaking load	612 kN
Tested breaking load	651 kN

Marking and traceability

SKU	090793

Handling, service life and disposal

Store the assembly in a dry, clean place protected from abrasion, excessive heat and chemicals. Inspect before each use for wear, cuts, deformation and shackle integrity; replace the item if damage is found or after overload events.
