

## EXTERNAL LAMP Rescue-MASTER 12V P/ JUDGMENT-Daniamant (4 m cable)

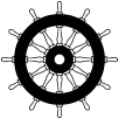

The Rescue-Ester 12V lamp is an external signaling light for motorized life boats, designed for the operation in direct current systems (12VDC). Approved according to solas and certified by MED/USCG, this lamp provides reliable intermittent lighting for visual location in sea emergencies. Its operation is manually activated by switch and does not require internal battery, being fed directly by the boat electrical system.

**COD EUROSUL:** 001114

**IMPA:** ---

**Part Number:** ---

### Approvals:

## Specifications

### Features:

Material: Resistant body in plastic with sealed lens

Fixers: Base with drilling for installation on flat surface of the boat

Design: Compact and robust, with protective dome and waterproof components

Power: 12V direct current via electrical wiring

Cable length: 4 meters

Operation Mode: Intermittent flash with manual drive

Autonomy: according to the capacity of the boat system (minimum 12 hours as solas)

### Applications:

External Lighting of Motorized Jobs

Emergency signaling in rescue maneuvers and abandonment  
Mandatory equipment on commercial and offshore vessels as per solas/immo

**Benefits:**

Readiness: Immediate activation by the vessel operator

Durability: resistant to vibration, impacts, fire and exposure to marine elements

Safety: high visibility in emergency situations and compliance with the most demanding maritime standards

**Technical Specifications:**

Model: Rescue-Ester 12V

Light type: intermittent (flashing) manual

Operating voltage: 12VDC (no internal battery)

Cable length: 4 meters

Certifications: MEDB000061F, Solas, IMO MSC.1/Circ.1628, EN 60945, ISO 24408

Life: according to manufacturer specifications

Boat Requirements: Electric Operation Capacity for at least 12 hours
