Specifications

Overview

Radar reflector for lifeboat, MOD B model, made of aluminum and sized at 305 mm in diameter. It is intended to improve vessel detection during lifesaving and rescue operations.

Application and use

Suitable for installation on lifeboats, helping increase radar visibility in emergency, abandonment, and search-and-rescue scenarios.

Construction characteristics

Material	Aluminum
Model	MOD B
Sub-item	For lifeboat

Technical specifications

Diameter (mm)	305
SKU	004394
IMPA	330190

Marking and traceability

Brand	EMF
Code	XTL3400043

This is a low-maintenance product, best checked visually at regular intervals and with fastening verified according to the vessel's routine. Store in a dry, protected place to preserve the aluminum finish and maintain in-service performance.
