

Rat guard for mooring rope diameter 40 to 44mm – Galvanized iron

The mooring rope rat guard is a sanitary protection device made of galvanized iron, firmly installed on mooring lines and ropes to prevent rats from boarding vessels. Compliant with all international quarantine regulations, it is essential on commercial ships, ports, and naval operations that require strict pest control. With a diameter of 600mm and compatible with ropes from 40 to 44mm, it meets IMPA 232364 standards, designated for rat guards used with ropes of diameter under 56mm. A durable, corrosion-resistant, and easy-to-install solution.
